

Data Center Cloud Services

Data Center Cloud Services for companies, powered by netrics

Is your internal IT infrastructure reaching the limits of its possibilities increasingly frequently? With Data Center Cloud Services from DataHub, your company does not need to make any investments in infrastructure. You concentrate on your core business while we design, create and operate your company-specific cloud platform – supported by our partner netrics. For example, the extremely easy to operate public cloud is suitable for non-business-critical applications. A dedicated private community cloud is the right solution for advanced and guaranteed functions. In turn, the managed services cloud is ideal for powerful, virtual servers with predefined templates (Windows/Linux) and individual statistics. However you combine the solutions, your data remains in Switzerland, specifically in our highly available data centers in Winterthur and Biel. This allows you to retain control at all times.

Secure and cost-effective

Setting up and maintaining your own highly available IT infrastructure is becoming increasingly expensive. With the DataHub Data Center Cloud, you reduce your IT costs and allow your IT team to concentrate on relevant tasks.

IT-Power «on demand»

Would you like to adapt your IT resources flexibly depending on internal and external requirements? With the DataHub Data Center Cloud, you scale your RAM, CPU and storage space entirely in accordance with your needs and receive your individual, hybrid cloud model.

Truly Swiss

Where exactly is my cloud? With the DataHub Data Center Cloud, you will never again have to ask this question. Your data is stored in our two highly available data centers in Winterthur and Biel. With our solution partner netrics, you are also advised by a Swiss service provider near you.

	Public Cloud Das Self Service-Paket für zusätzliche IT-Ressourcen.	Private Community Cloud Das hybride Modell mit dedizierten IT-Ressourcen.	Managed Service Cloud Massgeschneiderte Services für alle Ihre IT-Ressourcen.
